TWO-DAY SHORT COURSE, Saturday and Sunday 13 Quantitative Proteomics: Case Studies

Instructors

Meena Choi Genentech

Brendan MacLean U. of Washington

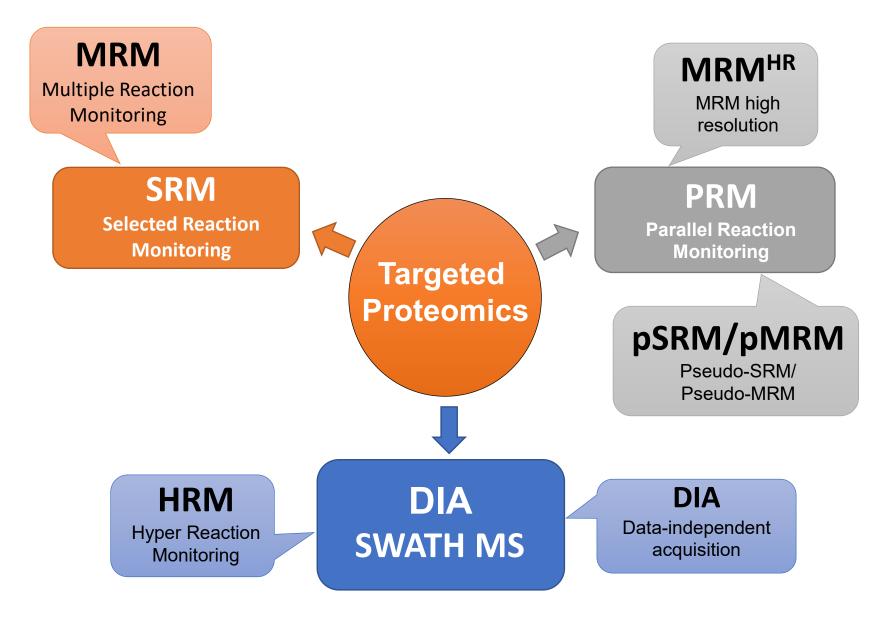

Devon Kohler Northeastern U.

Deanne Plubell U. of Washington

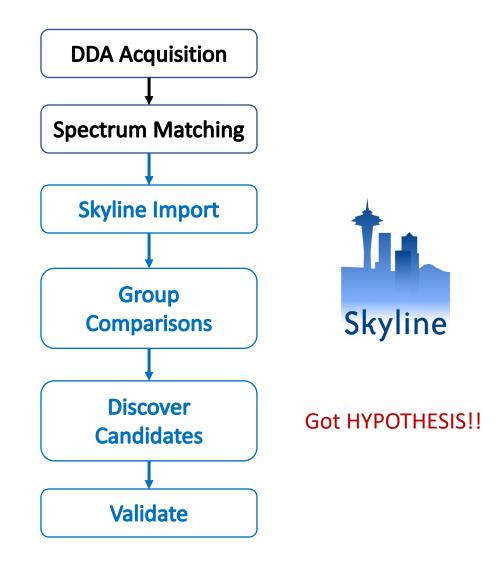

Olga Vitek Northeastern U.

| | Day1 | : 06/03/23 - Introduction | Day2: 06/04/23 - Advanced |
|---------------------------|--|---|--|
| Time | | | |
| 9:00am-10:00am | Lecture : Fundamental concepts of statistical experimental design | | Case study 2: Refining targets with DIA data in Skyline. <i>Highlights</i> : Preparing targets for a DIA experiment with many replicates |
| 10:00am-10:30am | break | | break |
| 10:30am-12:00pm | Case study 1 : Two-group group comparison design; SRM data in Skyline. <i>Highlights</i> : (1) Importance of experimental design, distinction between bio and tech replicates, and randomization. (2) Data exploration with chromatograms, signal interference, types of missing values). (3) Normalization with global standards. | | Case study 2: Multi-group comparison design with many bio replicates; DIA data in Skyline. <i>Highlights</i> : (1) Batch analysis of subsets of replicates. (2) Use of controls. (3) Between- and within-batch normalization. (3) Types of missing values. (4) Filtering with respect to quality of quantitative signals |
| 12:00pm-1:00pm | Lunch | | Lunch |
| 1pm-2pm | Case study 1, continued. | | Case study 2, continued. |
| 2pm-2:30pm | break | | break |
| 2:30pm-3:15pm | Lecture : Statistical inference, multiple testing, MSstats package | | Case study 2 : Statistical inference for multi-group experimental design in MSstatsShiny. <i>Highlights:</i> (1) Annotations of unbalanced |
| | | | |
| 3:15 - 4 pm | designs in MSs experimental design in | Stical inference for two-group comparison tatsShiny. <i>Highlights:</i> (1) Annotations of experiment with bio and tech reps. (2) Use and stical models. (3) Visualization of the results. | experimental design with multiple groups and age confounder. (2) Impact of adjustment for age on statistical conclusions. (3) Impact of various choices of normalization, filtering, and handling missing values on statistical conclusions. |
| 3:15 - 4 pm Extra time | designs in MSs experimental design in interpretation of statis | atsShiny. <i>Highlights:</i> (1) Annotations of experiment with bio and tech reps. (2) Use and | experimental design with multiple groups and age confounder. (2) Impact of adjustment for age on statistical conclusions. (3) Impact of various choices of normalization, filtering, and handling missing values |
| | designs in MSs experimental design in interpretation of statis | tatsShiny. <i>Highlights:</i> (1) Annotations of experiment with bio and tech reps. (2) Use and stical models. (3) Visualization of the results. A: Skyline and MSstats based on participants' | experimental design with multiple groups and age confounder. (2) Impact of adjustment for age on statistical conclusions. (3) Impact of various choices of normalization, filtering, and handling missing values on statistical conclusions. Extra practice and Q&A: Skyline and MSstats based on participants' |
| | designs in MSs experimental design in interpretation of statis Extra practice and Q& | tatsShiny. <i>Highlights:</i> (1) Annotations of experiment with bio and tech reps. (2) Use and stical models. (3) Visualization of the results. A: Skyline and MSstats based on participants' | experimental design with multiple groups and age confounder. (2) Impact of adjustment for age on statistical conclusions. (3) Impact of various choices of normalization, filtering, and handling missing values on statistical conclusions. Extra practice and Q&A: Skyline and MSstats based on participants' |
| | designs in MSs experimental design in interpretation of statis Extra practice and Q& Brendan | tatsShiny. <i>Highlights:</i> (1) Annotations of experiment with bio and tech reps. (2) Use and stical models. (3) Visualization of the results. A: Skyline and MSstats based on participants' | experimental design with multiple groups and age confounder. (2) Impact of adjustment for age on statistical conclusions. (3) Impact of various choices of normalization, filtering, and handling missing values on statistical conclusions. Extra practice and Q&A: Skyline and MSstats based on participants' |
| | designs in MSs experimental design in interpretation of statis Extra practice and Q& Brendan Olga | tatsShiny. <i>Highlights:</i> (1) Annotations of experiment with bio and tech reps. (2) Use and stical models. (3) Visualization of the results. A: Skyline and MSstats based on participants' | experimental design with multiple groups and age confounder. (2) Impact of adjustment for age on statistical conclusions. (3) Impact of various choices of normalization, filtering, and handling missing values on statistical conclusions. Extra practice and Q&A: Skyline and MSstats based on participants' |

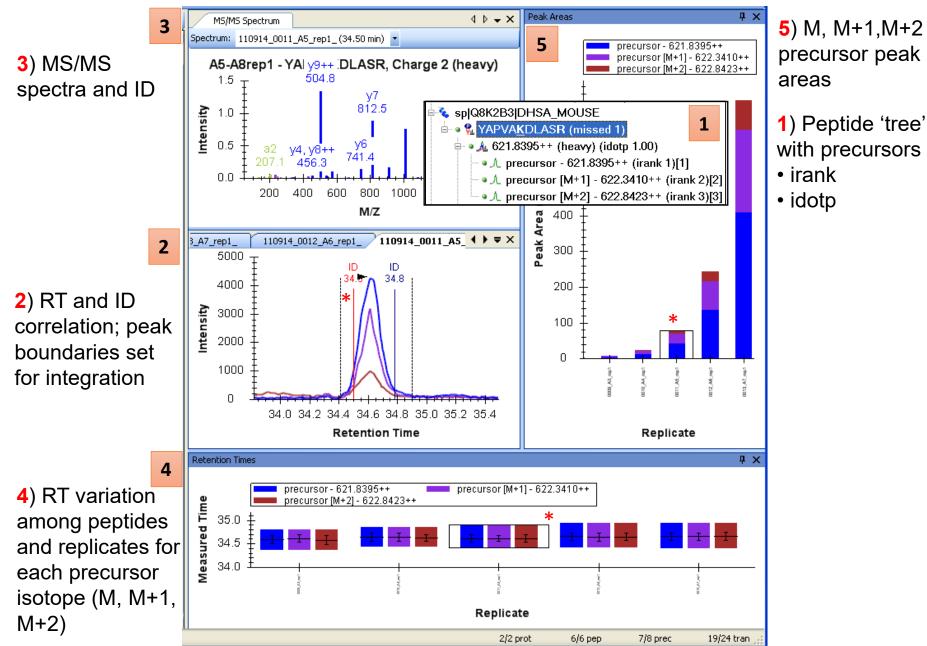

Targeted proteomics – various approaches

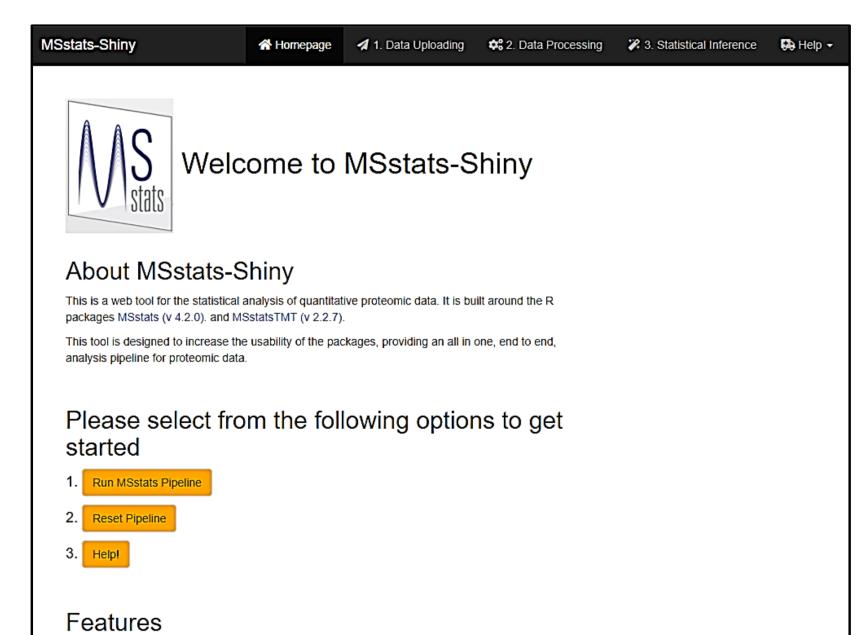

Discovery to Targeted with Skyline

Skyline interface for MS1 Filtering data

Statistical analysis with MSstatsShiny

Differentially abundant proteins across conditions
